

REINFORCEMENTS

Glass Reinforced Concrete. The Strength of Concrete. The Convenience of Plastic.

45-51 Clapham Road, Regents Park NSW 2143

Ph: 1300 885 295

Now open in Melbourne and Perth

As one of Australia's most recognised names in plumbing and electrical products, Mascot Engineering has good reason to feel confident with the opening of our new warehouses in Melbourne and Perth.

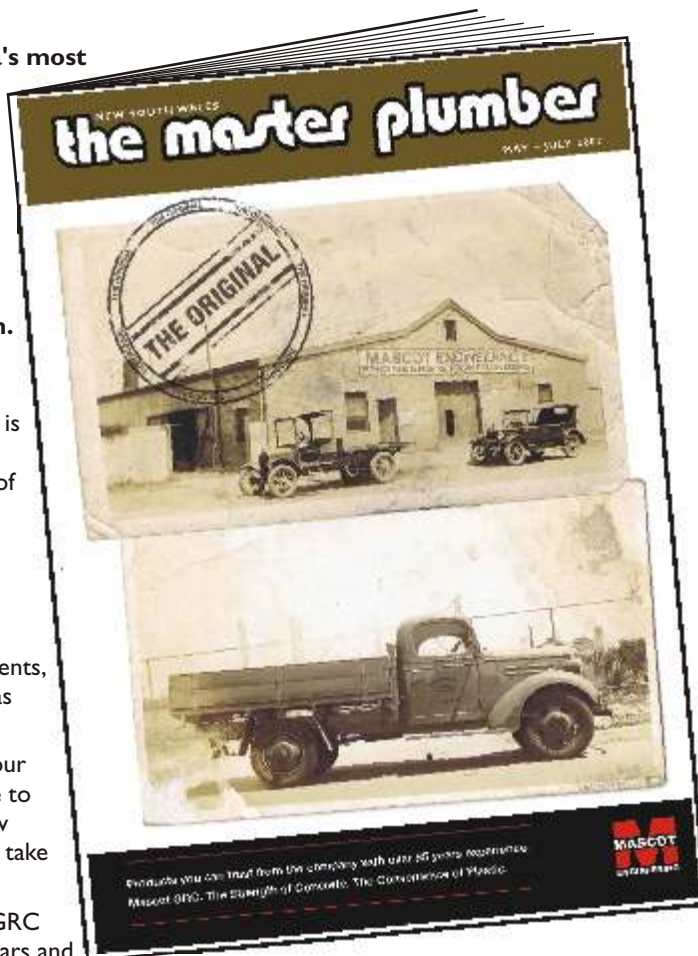

Eighty seven years as illustrated in a recent Master Plumber journal is a long time. That's how long we've been a part of the Sydney building industry.

In many ways we've grown up with the development of new standards and requirements, creating new products as required.

Your needs become our products, and if we have to acquire expertise in new materials, we're keen to take up the challenge.

We've been making GRC products for over 25 years and proudly claim to be Australia's leading manufacturer of products in this remarkable material.

Mascot Engineering can be contacted on one centralised number 1300 885 295.

The Master Plumbers Journal of NSW of May - July 2007 (pictured above) highlighted Mascot Engineering's long period of being part of Sydney's development.

Welcome

I would like to welcome Perth and Melbourne to our quarterly newsletter, *Reinforcements*.

This is the first edition to go out to new customers and staff since opening our new branches, and I sincerely hope you find it as helpful as others have found previous editions.

One of the most important reasons for producing this publication is to keep you informed of developments in the world of drainage, electrical and industrial trade waste products as well as our unique glass reinforced concrete products.

You will see that we have introduced a range of solid top cast iron 'drop in' covers that are proving to be extremely popular and easy to install.

These 'drop in' covers are specifically designed to drop into the rebate of our GRC Pits.

You will also see that we have introduced a new 'cost effective and practical' Mascot GRC product called DriveDrain. We also talk about how you can overcome annoying installation issues with our GRC Risers by adjusting the height on-site.

Welcome to Mascot Engineering. We trust this is of use to you and that you'll keep an eye out for our next edition.

Nick Taylor

One easy number

Mascot Engineering now has one easy number to contact us no matter where you are in Australia.

Simply dial 1300 885 295 and you'll be put through to our helpful staff to direct your call.

You can also fax us on our centralised 1300 885 296 number.

Airport West, VIC 3042

Introducing the new GRC DriveDrain

Easy Drainage for any Driveway Industrial - Commercial - Residential

Solid top covers easy to install

Mascot has introduced a range of solid top cast iron covers that are lightweight and easy to install.

These drop-in covers have been specifically designed to drop into the rebate of our GRC Pits. The frame is attached to the pit with epoxy to hold it in place.

These covers bolt down and are fitted with standard lifting key holes for easy access.

They can also be supplied with brass marker plates if required.

The cast iron covers are watertight and are rated to Class C for pits up to 900sq and to Class B for the larger 1200sq.

We also manufacture traditional gastight cast iron in-fill covers as well as lightweight pedestrian duty GRC Covers.

Regardless of what type of cover you require for your next project, call the team at Mascot... we've got you covered!

We proudly present our latest Mascot GRC product - DriveDrain 100 & 200.

The GRC DriveDrain is cost-effective and very practical.

It offers the advantages of low weight for handling ease, yet is strong enough to stand up to industrial and commercial applications as well as being suited to residential uses.

This new drainage system is designed for ease of installation.

The trenches simply interlock together and end caps are available.

DriveDrain is available with a range of Galvanised Mild Steel Grates as standard to suit both heavy and light duty applications.

Custom Stainless Steel Heelproof grates are also available for when aesthetics are paramount.

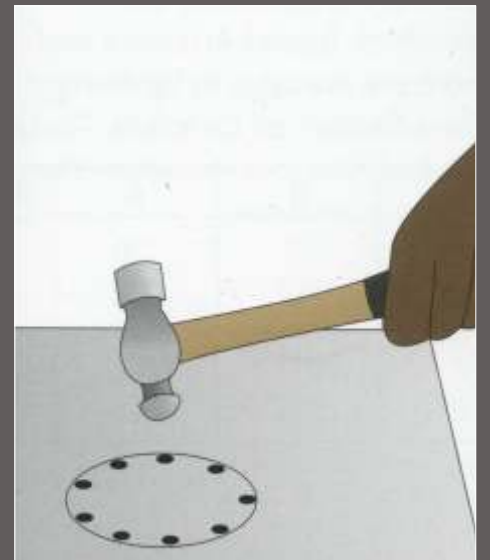

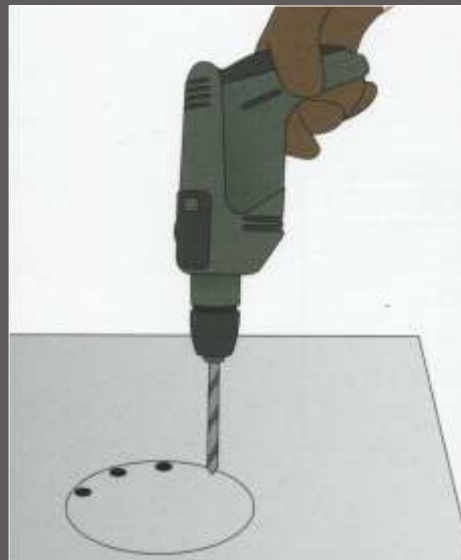

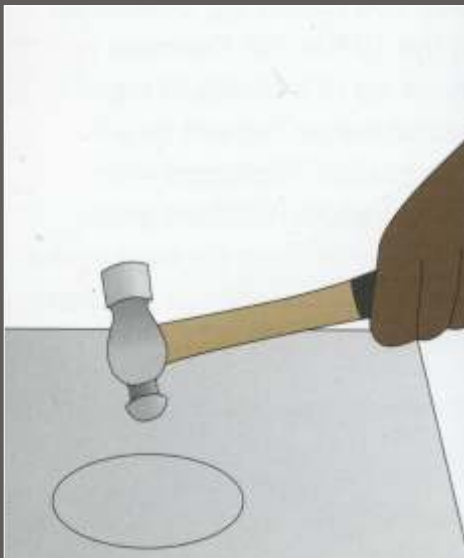

We'll also be adding traditional Cast Iron Grates in the coming months.

Conduit entries have never been so easy

GR Concrete pits don't have a knockout, leaving you to choose where the entries are to go as well as the size and number of entries on each side.

There's no need to 'stitch' drill. Simply mark out where the entry is to be made and starting in the centre, softly tap the pit with a ball pein hammer.

Alternatively, for larger entries (150mm), once you've marked out the hole required, use a masonry drill to drill at 50mm centres. Holes can also be formed using a grinder with masonry disc.

Adjustable risers? No problem!

You can cut GRC risers on site

We understand that things don't always go to plan. Have you ever needed an odd size riser - something like 138mm, or 424mm?

With our exclusive Glass Reinforced Concrete Risers, anything is possible.

The qualities of GRC enable you to cut down your riser to the height you need on site.

Our 175mm risers are straight edged, so that when you cut them down, they will still fit straight into the rebate of your pit.

This is just another reason why you should choose GRC pits for your next project. If you have any questions, contact our Sales Team on 1300 885 295.

ORDERS FILLED - NO DELAY

Our large stockholding means that most products are in stock at all times, so call us first and get just what you want when you want it!

1300 885 295

Finally - easier access with new GRC covers

A GRC cover for our pits is nothing new. We've been making them alongside our GRC pits for the last 25 years.

But now we've introduced key holes that suit standard lifting keys normally found in Gastight Cast Iron Covers.

These Australian Standard Key Holes allow easier access to ensure all maintenance is done simply and without damage to the product.

New moulds have been made to ensure the overall finish of the product has been improved.

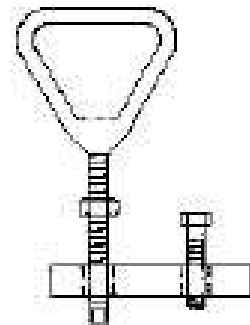

As well as the plain checker-plate finish, we have covers with Communications and Electricity imprinted into the surface.

These covers are all stock items and there is no extra charge for the labelling.

For more information on these covers call the sales team on 1300 885 295.

Mascot Lifting Keys are the easiest way to gain access to all Gastight Access Covers (and our new GRC Covers). Available in short and long handle versions, they're a must have for every tool kit.

Look out for us in Perth

Mascot Engineering's Perth branch is now in full operation.

We have been supplying industrial trade waste control products to Perth for over 10 years through Higgins Agencies.

Our location remains the same - the old Higgins warehouse in Malaga. Clients will find an improved service as we're offering technical advice and support to match our products.

Our stock holding of Grease Arrestors and other Industrial products has been expanded and we'll also be introducing other Mascot GRC Products.

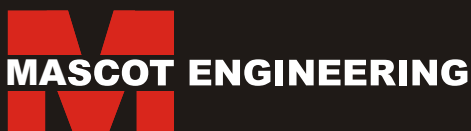

The Sales team comprises Kevin Burrows who has over 15 years industry experience and Charlie Wood. Charlie, with a similar length of experience had until recently been working with Mascot Engineering products with Higgins.

There is now one number for all Mascot Engineering items, simply call 1300 885 295.
